2-1/4 x 9 x 3 PERMEABLE BOARDWALK

Whitacre Greer Permeable Pavers are designed to assist with storm water management goals. Permeable pavers may be used by municipal engineers to assist in compliance with Storm water Phase II requirements for Municipal Separate Storm Sewer Systems (MS4) by allowing water to go into the ground between the pavers rather than running off into a drain, ditch or settling pond. Permeable Boardwalk Pavers are 3-inches thick and suitable for pedestrian and vehicular applications. Shade 48 Recycled is comprised of clay, shale and grog that have been previously discarded. Whitacre Greer - winner Brick Industry Association Environmental Stewardship Award.
